COMMENT     Original source text: Plasmodium falciparum (individual_isolate
            Kenyan) (clone: BRA3-14b) blood stage parasite DNA; Plasmodium
            falciparum (individual_isolate Kenyan) (clone: BRA3-5b) blood stage
            parasite DNA; Plasmodium falciparum (individual_isolate Kenyan)
            (clone: BRA3-28e) blood stage parasite DNA; Plasmodium falciparum
            (individual_isolate Kenyan) (clone: BRA3-29b) blood stage parasite
            DNA; and Plasmodium falciparum (individual_isolate Kenyan) (clone:
            BRA3-19a) blood stage parasite DNA.
            1. Last author is Altaf A. Lal 2. The following clones have the sam
            e nucleotide sequence: BRA3-5b; BRA3-19a; BRA3-14b (one silent
            change at 5181,
            A to G) and BRA3-28e (one silent change at 5040, T to C) Clone name
            abbreviations: KEN for Kenya; PNG for Papua New Guinea and BRA for
            Brazil. For each clone, the number following the KEN, PNG or BRA
            represents group number, the number following the '-' denotes the
            patient's blood sample number and the lower case letter represents
            recombinant clones from the corresponding isolates.

            stage-specific antigen-1 (LSA-1) of Plasmodium falciparum from
            field isolates
  JOURNAL   Mol. Biochem. Parasitol. 71 (2), 291-294 (1995)
  PUBMED    7477115
COMMENT     Original source text: Plasmodium falciparum (individual_isolate
            Kenyan) (clone: KEN2-51b) blood stage parasite DNA; Plasmodium
            falciparum (individual_isolate Kenyan) (clone: BRA2-30e) blood
            stage parasite DNA; Plasmodium falciparum (individual_isolate
            Kenyan) (clone: PNG2-26e) blood stage parasite DNA; Plasmodium
            falciparum (individual_isolate Kenyan) (clone: BRA2-14c) blood
            stage parasite DNA; Plasmodium falciparum (individual_isolate
            Kenyan) (clone: BRA2-30b) blood stage parasite DNA; Plasmodium
            falciparum (individual_isolate Kenyan) (clone: PNG2-7f) blood stage
            parasite DNA; Plasmodium falciparum (individual_isolate Kenyan)
            (clone: PNG2-9f) blood stage parasite DNA; Plasmodium falciparum
            (individual_isolate Kenyan) (clone: PNG2-11a) blood stage parasite
            DNA; Plasmodium falciparum (individual_isolate Kenyan) (clone:
            PNG2-11b) blood stage parasite DNA; and Plasmodium falciparum
            (individual_isolate Kenyan) (clone: PNG2-19d) blood stage parasite
            DNA.
            1. Last author is Altaf A. Lal 2. Following clones also have the sa
            me nucleotide sequence: KEN121b, KEN140h, KEN156b, PNG1281 (at 5193
            A to T), P
            NG128c, BRA119e
            Clone name abbreviations: KEN for Kenya; PNG for Papua New Guinea
            and BRA for Brazil. For each clone, the number following the KEN,
            PNG or BRA represents group number, the number following the '-'
            denotes the patient's blood sample number and the lower case letter
            represents recombinant clones from the corresponding isolates.

PFALSA1A
LOCUS       PFALSA1A                 843 bp    DNA     linear   INV 19-AUG-1995
DEFINITION  Plasmodium falciparum (clone BRA7-30a) liver stage-specific antigen
            1 (LSA-1) gene, 3' end of cds.
ACCESSION   L40908
VERSION     L40908.1  GI:725293
KEYWORDS    exoerythrocytic; liver stage-specific antigen; liver stage-specific
            antigen 1; malaria.
SOURCE      Plasmodium falciparum (malaria parasite P. falciparum)
  ORGANISM  Plasmodium falciparum
            Eukaryota; Alveolata; Apicomplexa; Haemosporida; Plasmodium.
REFERENCE   1  (bases 1 to 843)
  AUTHORS   Yang,C., Shi,Y.P., Udhayakumar,V., Alpers,M.P., Povoa,M.M.,
            Hawley,W.A., Collins,W.E. and Lal,A.A.
  TITLE     Sequence variations in the non-repetitive regions of the liver
            stage-specific antigen-1 (LSA-1) of Plasmodium falciparum from
            field isolates
  JOURNAL   Mol. Biochem. Parasitol. 71 (2), 291-294 (1995)
   PUBMED   7477115
COMMENT     Original source text: Plasmodium falciparum (individual_isolate
            Brazilian) (clone: BRA7-30a) blood stage parasite DNA.
            Clone name abbreviations: KEN for Kenya; PNG for Papua New Guinea
```

```
          and BRA for Brazil. For each clone, the number following the KEN,
          PNG or BRA represents group number, the number following the '-'
          denotes the patient's blood sample number and the lower case letter
          represents recombinant clones from the corresponding isolates.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  JOURNAL   Submitted (23-OCT-2003) Balzergue S., UMRGV, INRA/CNRS, 2 rue
            Gaston Cremieux, 91057 Evry cedex, FRANCE
COMMENT     PCR was performed on DNA from transformants of Arabidopsis thaliana
            plants from INRA (Versailles). The DNA fragment(s) resulting from
            the PCR were directly sequenced from the left or the right border
            to determine the genomic sequence flanking the insertion. T-DNA
            derived sequences were removed. Information to order the
            corresponding mutant line and a link to a database providing a
            graphical display of the insertion site are available at
            http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
            been generated in the framework of the French plant genomics
            program 'Genoplante' (http://www.genoplante.com and
            http://genoplante-info.infobiogen.fr).

  JOURNAL   Submitted (23-OCT-2003) Balzergue S., UMRGV, INRA/CNRS, 2 rue
            Gaston Cremieux, 91057 Evry cedex, FRANCE
COMMENT     PCR was performed on DNA from transformants of Arabidopsis thaliana
            plants from INRA (Versailles). The DNA fragment(s) resulting from
            the PCR were directly sequenced from the left or the right border
            to determine the genomic sequence flanking the insertion. T-DNA
            derived sequences were removed. Information to order the
            corresponding mutant line and a link to a database providing a
            graphical display of the insertion site are available at
            http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
            been generated in the framework of the French plant genomics
            program 'Genoplante' (http://www.genoplante.com and
            http://genoplante-info.infobiogen.fr).

TITLE Direct Submission
JOURNAL Submitted (23-OCT-2003) Balzergue S., UMRGV, INRA/CNRS, 2 rue Gaston Cremieux, 91057 Evry cedex, FRANCE
COMMENT PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at http://dbsgap.versailles.inra.fr/publiclines/. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (http://www.genoplante.com and http://genoplante-info.infobiogen.fr).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  TITLE     Direct Submission
  JOURNAL   Submitted (12-DEC-2003) Hidetoshi Inoko, Tokai University School of
            Medicine, Department of Genetic Information; Bohseidai, Isehara,
            Kanagawa, 259-1193, Japan (E-mail:hinoko@is.icc.u-tokai.ac.jp,
            Tel:81-463-93-1121, Fax:81-463-94-8884)
COMMENT     Polymorphisms were confirmed by comparing with the pooled DNA
            typing data of 88 Dutch population or 100 Australian. When there
            was no significant difference between the Japanese and these
            Caucasians, individual typing was performed to confirm
            polymorphisms.

COMMENT     PCR was performed on DNA from transformants of Arabidopsis thaliana
            plants from INRA (Versailles). The DNA fragment(s) resulting from
            the PCR were directly sequenced from the left or the right border
            to determine the genomic sequence flanking the insertion. T-DNA
            derived sequences were removed. Information to order the
            corresponding mutant line and a link to a database providing a
            graphical display of the insertion site are available at
            http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
            been generated in the framework of the French plant genomics

  TITLE     Direct Submission
  JOURNAL   Submitted (12-DEC-2003) Hidetoshi Inoko, Tokai University School of
            Medicine, Department of Genetic Information; Bohseidai, Isehara,
            Kanagawa, 259-1193, Japan (E-mail:hinoko@is.icc.u-tokai.ac.jp,
            Tel:81-463-93-1121, Fax:81-463-94-8884)
COMMENT     Polymorphisms were confirmed by comparing with the pooled DNA
            typing data of 88 Dutch population or 100 Australian. When there
            was no significant difference between the Japanese and these
            Caucasians, individual typing was performed to confirm
            polymorphisms.

  JOURNAL   Submitted (10-JAN-2001) Genomics, Monsanto, 800 North Lindbergh
            Blvd., Creve Coeur, MO 63167, USA
COMMENT     Derived from rice genomic sequences generated from the Monsanto
            Rice Genome Sequencing project. Please see
            http://www.rice-research.org for more information.  The sequence
            data were produced primarily in the laboratories of Dr. Leroy Hood
            at the University of Washington in Seattle.

XX
CC This invention describes novel oligonucleotide primers or peptide nucleic
CC acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP)
CC and cytosine methylation status in chemically pretreated genomic DNA. The
CC oligonucleotides are used for diagnosis and/or prognosis of cancer and a
CC range of diseases including immune system, gastrointestinal, respiratory,
CC central nervous system, cardiovascular and metabolic disorders. The

```
CC   oligomers are also used for detecting cell type differentiation. ABC00010

PT   using single reaction mixt. to detect and identify infections by related
PT   viruses.
XX
PS   Claim 14(i); Page 26; 41pp; Spanish.
XX
CC   The known amino acid sequences of DNA polymerases from 6 different
CC   members of the herpes viridae family were aligned so that conserved
CC   regions could be identified. A set of primers (AAQ53331-5) was designed
CC   based on the conserved amino acid motif IYGDTD and having 6 non-conserved
CC   nucleotides at the 5'-end. Sequence AAQ53332 is specific for VZV.

PT Differential diagnosis of infectious agents by genomic amplification -
PT using primer mixts., each specific for a family of infectious agents,
PT esp. for distinguishing human herpes virus and entero-virus infection.
XX
PS Claim 13; Page 29; 55pp; Spanish.
XX
CC A mixture of amplification primers was designed which could amplify both
CC enterovirus and herpesvirus sequences from the same sample. The mixture
CC contained at least one of the primers in AAT37520-T37522 and at least one
CC of the primers in AAT37523-T37532. A second PCR can be performed on the
CC products of the first reaction in order to distinguish specific viruses.
CC Alternatively, the PCR products can be detected by hybridisation to virus
CC -specific probes

PT New human genome-derived single exon nucleic acid probes useful for human
PT gene expression analysis, for identifying or characterizing alternative
PT splicing events, for assessing genomic alterations or as tools for
PT surveying tissues.
XX
PS Claim 1; SEQ ID NO 22059; 80pp; English.
XX
CC The invention relates to a nucleic acid probe for measuring human gene
CC expression, comprising any of the 27,400 fully defined nucleotide
CC sequences in the specification, or their complements or fragments, and
CC encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC fully defined in the specification. The probe is a single exon probe that
CC hybridises under high stringency conditions to a nucleic acid molecule
CC expressed in human cells or tissues. Also included are a spatially-
CC addressable set of single exon nucleic acid probes for measuring human
CC gene expression (comprising a plurality of single exon nucleic acid
CC probes cited above, where each of the plurality of probes is separately
CC and addressably isolatable or amplifiable from the plurality), a single
CC exon microarray for measuring human gene expression, a method of
CC measuring human gene expression, a vector comprising the single exon
CC probe cited above, an ORF-encoded peptide comprising at least 8
CC contiguous amino acids of any of the above- mentioned amino acid
CC sequences (optionally with conservative amino acid substitutions), an
CC isolated antibody that binds specifically to a peptide cited above,
CC methods of selling and/or licensing single exon probes or microarrays to
CC a customer desiring to measure gene expression, a method of providing
CC human gene expression data by subscription, and a computer-readable
CC storage medium which contains a database having a plurality of records
CC (each record including data on the expression of a single exon probe
CC cited above. The probe, methods and apparatus are useful in gene
CC expression analysis. The probes may be used as tools for surveying
CC tissues to detect the presence of expressed messages that contain their
CC specific exon, or in constructing genome-derived single exon microarrays.
CC In addition, the probes are used in identifying and characterising
CC alternative splicing events, in detecting and characterising gross
CC alterations in the genomic locus that includes their exon, in assessing
CC smaller genomic alterations, in priming the synthesis of nucleic acids,
CC or in expressing the ORF-encoded peptide. The present sequence is a human
CC single exon probe of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030194704

PT   New polynucleotide isolated from human gene useful for detection of
PT   single nucleotide polymorphisms.
XX
PS   Claim 1; SEQ ID NO 363; 687pp; Japanese.
XX
CC   This invention relates to novel polynucleotides isolated and purified
CC   from 99 human genes that comprises any one of 863 fully defined sequences
CC   of 121 nucleotides, as given in specification. Specifically, it refers to
CC   these polynucleotides as each containing a single base substitution
CC   (otherwise known as a single nucleotide polymorphism) that are useful as
CC   genetic markers and for diagnosing certain diseases. The present
CC   invention provides oligonucleotides containing these SNPs that encode
CC   receptor proteins, as well as PCR primers, labeling probes and a
CC   microarray. Accordingly, this array is useful for diagnosing disease and
CC   determining side effects of a medical agent. This polynucleotide sequence
CC   is a human gene containing a SNP, as given in an exemplification of the
CC   invention.

PT   New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT   obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT   diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
PS   Claim 1; SEQ ID NO 23604; 71pp + Sequence Listing; English.
XX
CC   The present sequence is one of a large number of 5' ESTs derived from
CC   mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC   identified within the present sequence. The 5' ESTs were prepared from
CC   total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC   sequences usually correspond mainly to the 3' untranslated region (UTR)
CC   of the mRNA because they are often obtained from oligo-dT primed cDNA
CC   libraries. Such ESTs are not well suited for isolating cDNA sequences
CC   derived from the 5' ends of mRNAs and even in those cases where longer
CC   cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC   ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC   to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC   diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC   They are used to obtain upstream regulatory sequences and to design
CC   expression and secretion vectors

PT   New DNA, comprising a sequence that codes for a protein essential for
PT   seedling growth, for identifying potential herbicides and developing
PT   herbicide tolerant plants, tissues, seeds and cells.
XX
PS   Claim 46; Page 87; 100pp; English.
XX
CC   This is the 3' untranslated region (UTR) of cDNA corresponding to the
CC   Arabidopsis thaliana 245 gene. The coding region (see AAA50078) of the
CC   cDNA codes for a protein (see AAY95654) that is essential for normal
CC   seedling growth and development, and which shows sequence similarity to
CC   peptide release factor 2. The 245 cDNA was isolated from a cDNA library
CC   using Arabidopsis peptide release factor DNA as probe. The 245 protein is
CC   a useful herbicide target, and the invention provides screening assays
CC   useful for identifying inhibitors that are potential herbicides. The
CC   invention is also applied to using the 245 gene for the development of
CC   herbicide tolerant plants, plant tissues, plant seeds, and plant cells

```
XX
CC   The invention relates to nucleic acid molecules from regions of the
CC   soybean genome which are associated with soybean cyst nematode (SCN)
CC   resistance. The nucleic acids are used to transform plants, and can
CC   produce soybean plants having an rhg1 or an Rhg4 SCN resistant allele.
CC   The nucleic acids can be used for investigating rhg1 or Rhg4 haplotypes
CC   of soybean plants and for introgressing SCN resistance or partial SCN
CC   resistance into soybean plants. They can also be used in plant breeding
CC   programmes. The invention also relates to proteins encoded by such
CC   nucleic acid molecules, as well as antibodies capable of recognising
CC   these proteins. The present sequence is a nucleic acid molecule provided
CC   in the specification

PT   Composition for therapy and diagnosis of ovarian cancer comprising
PT   polypeptide of a ovarian tumor polypeptide, polynucleotide encoding
PT   polypeptide, antibody specific to polypeptide or T cell expressing
PT   polypeptide.
XX
PS   Claim 1; SEQ ID NO 136; 489pp; English.
XX
CC   The present invention describes a composition (I) comprising: carriers
CC   and immunostimulants; and a polypeptide (II) of a ovarian tumour
CC   polypeptide encoded by a polynucleotide (III) having a cDNA sequence (S1)
CC   from the 10912 nucleotide sequences as given in ABL77023 to ABL87934,
CC   (III) encoding (II) having a sequence (S2), a T cell population of (II),
CC   or antigen presenting cells that express (II). (I) has cytostatic
CC   activity. An oligonucleotide (IV) that hybridises to (S1) can be used for
CC   detecting ovarian cancer in a patient's biological sample preferably
CC   serum or ovarian tissue. The method comprises contacting a biological
CC   sample from a patient with (IV), detecting the amount of polynucleotide
CC   hybridising to (IV) and comparing the amount to a predetermined cutoff
CC   value and thereby detecting ovarian cancer in the patient, where the
CC   amount of polynucleotide hybridising to (IV) is detected preferably by
CC   polymerase chain reaction (PCR). (I) comprising (III) and/or (II) is
CC   useful for stimulating and/or expanding T cells specific for an ovarian
CC   tumour protein comprising contacting T cells with (III) or (II). (III) is
CC   useful in design and preparation of ribozyme molecules for inhibiting
CC   expression of the tumour polypeptides and proteins in tumour cells; and
CC   to isolate a full length gene from a suitable library e.g., a tumour cDNA
CC   library using well known techniques

PT Novel human polypeptides and polynucleotides useful for diagnosing,
PT preventing and treating cardiovascular disease, neurodegenerative,
PT hyperproliferative disorders and disorders related to organ
PT transplantation.
XX
PS Claim 1; Page 1401; 2508pp; English.
XX
CC Sequences ABP31028-ABP35561 represent 4534 novel human proteins
CC designated ORF (open reading frame) 1-4534, and sequences ABN75054-
CC ABN79587 represent cDNAs encoding them. The invention also encompasses
CC polypeptides at least 80% identical to the ORF1-ORF4534 (collectively
CC referred to as ORFX) proteins, polynucleotides at least 85% identical to
CC the ORFX nucleic acid sequences, vectors and host cells comprising ORFX
CC polynucleotides, the recombinant production of ORFX proteins, antibodies
CC specific for ORFX proteins, methods of detecting ORFX polynucleotides and
CC polypeptides, methods of screening for modulators of ORFX expression or
CC activity, and methods of screening individuals for a predisposition to an
CC ORFX-associated disorder. The ORFX proteins of the invention have a wide
CC range of biological activities, such as cytokine, cell proliferation,
CC cell differentiation, immune modulation, haematopoiesis regulation,
CC tissue growth, angiogenesis, activin or inhibin activity, chemotactic/
CC chemokinetic activity, haemostatic activity, thrombolytic activity,
CC receptor/ligand, antiinflammatory activity, tumour inhibition activity,
CC and antiinfective activity, and may also be involved in the determination
CC of bodily characteristics, fertility and behaviour. ORFX proteins,
CC nucleic acids and antibodies may be used in the treatment of cancers,
CC other proliferative disorders such as psoriasis and benign tumours,
CC neurological disorders such as epilepsy and Alzheimer's disease,
CC cardiovascular diseases, immune system disorders, disorders related to
CC organ transplantation, disorders of tissue growth and regeneration,
CC diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester
CC storage disease, and infectious diseases caused by viral, bacterial,
CC fungal and other pathogens. ORFX nucleic acids may also be used as a
CC source of primers and probes, in the detection of ORFX genomic sequences
CC or transcripts, in the identification and cloning of homologous
CC sequences, in genetic diagnosis, and in forensic biology. The ORFX
CC nucleic acids may additionally be used to produce transgenic animals
CC which may be useful for studying the function and/or activity of ORFX
CC protein, and in drug screening. The ORFX proteins may also be used as
CC immunogens to generate specific antibodies, which are useful in the
CC diagnosis, treatment and monitoring of ORFX-associated diseases

PT Novel isolated nucleic acid molecule associated with cancerous state of
PT prostate cells and correlating with presence of prostate cancer, useful
PT for detecting presence of prostate cancer, stage of prostate cancer.
XX
PS Claim 1; Page 1155; 11750pp; English.
XX
CC The invention relates to an isolated nucleic acid molecule (I) comprising
CC a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the
CC specification or its complement. (I) is useful for: (a) assessing whether
CC a patient is afflicted with prostate cancer; (b) monitoring the
CC progression of prostate cancer in a patient; (c) assessing the efficacy
CC of a test compound to inhibit prostate cancer in a patient; (d) assessing

```
CC   the efficacy of a therapy for inhibiting prostate cancer in a patient;
CC   (e) selecting a composition for inhibiting prostate cancer in a patient;
CC   (f) assessing the prostate cell carcinogenic potential of a compound; (g)
CC   determining whether prostate cancer has metastasized in a patient; (h)
CC   assessing the aggressiveness or indolence of prostate cancer in a patient
CC   ; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker

PT   Composition for therapy and diagnosis of ovarian cancer comprising
PT   polypeptide of a ovarian tumor polypeptide, polynucleotide encoding
PT   polypeptide, antibody specific to polypeptide or T cell expressing
PT   polypeptide.
XX
PS   Claim 1; SEQ ID NO 64; 489pp; English.
XX
CC   The present invention describes a composition (I) comprising: carriers
CC   and immunostimulants; and a polypeptide (II) of a ovarian tumour
CC   polypeptide encoded by a polynucleotide (III) having a cDNA sequence (S1)
CC   from the 10912 nucleotide sequences as given in ABL77023 to ABL87934,
CC   (III) encoding (II) having a sequence (S2), a T cell population of (II),
CC   or antigen presenting cells that express (II). (I) has cytostatic
CC   activity. An oligonucleotide (IV) that hybridises to (S1) can be used for
CC   detecting ovarian cancer in a patient's biological sample preferably
CC   serum or ovarian tissue. The method comprises contacting a biological
CC   sample from a patient with (IV), detecting the amount of polynucleotide
CC   hybridising to (IV) and comparing the amount to a predetermined cutoff
CC   value and thereby detecting ovarian cancer in the patient, where the
CC   amount of polynucleotide hybridising to (IV) is detected preferably by
CC   polymerase chain reaction (PCR). (I) comprising (III) and/or (II) is
CC   useful for stimulating and/or expanding T cells specific for an ovarian
CC   tumour protein comprising contacting T cells with (III) or (II). (III) is
CC   useful in design and preparation of ribozyme molecules for inhibiting
CC   expression of the tumour polypeptides and proteins in tumour cells; and
CC   to isolate a full length gene from a suitable library e.g., a tumour cDNA
CC   library using well known techniques

PT   New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT   obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT   diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
PS   Claim 1; SEQ ID NO 22577; 71pp + Sequence Listing; English.
XX
CC   The present sequence is one of a large number of 5' ESTs derived from
CC   mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC   identified within the present sequence. The 5' ESTs were prepared from
CC   total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC   sequences usually correspond mainly to the 3' untranslated region (UTR)
CC   of the mRNA because they are often obtained from oligo-dT primed cDNA
CC   libraries. Such ESTs are not well suited for isolating cDNA sequences
CC   derived from the 5' ends of mRNAs and even in those cases where longer
CC   cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC   ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC   to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC   diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC   They are used to obtain upstream regulatory sequences and to design
CC   expression and secretion vectors

PT   New colon cancer polypeptides and polynucleotides, useful as vaccines,
PT   for diagnosing, preventing, and treating colon cancer, and as markers for
PT   the progression of cancer.
XX
PS   Claim 1; SEQ ID NO 1741; 147pp; English.
XX
CC   The invention relates to polynucleotides encoding colon tumour proteins.
CC   The polynucleotides and encoded polypeptides are useful in pharmaceutical
CC   compositions, such as vaccines, for the diagnosis, prevention, and
CC   treatment of colon cancer. Polynucleotide sequences may be used as
CC   hybridisation probes or primers, and in the design and preparation of
CC   ribozyme molecules for inhibiting expression of tumour polypeptides and
CC   proteins in tumour cells. The compositions are useful for stimulating an
CC   immune response against cancer, particularly for the immunotherapy of
CC   colon cancer, and as markers for the progression of cancer. ABK44450-
CC   ABK46237 represent coding sequences of human colon tumour proteins of the
CC   invention. Note: With the exception of SEQ ID No 1 and 2, the sequence
CC   data for this patent did not form part of the printed specification but
CC   was supplied by the European Patent Office

PT   New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT   obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT   diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX
PS   Claim 1; SEQ ID NO 28463; 71pp + Sequence Listing; English.
XX
CC   The present sequence is one of a large number of 5' ESTs derived from
CC   mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC   identified within the present sequence. The 5' ESTs were prepared from
CC   total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC   sequences usually correspond mainly to the 3' untranslated region (UTR)
CC   of the mRNA because they are often obtained from oligo-dT primed cDNA
CC   libraries. Such ESTs are not well suited for isolating cDNA sequences
CC   derived from the 5' ends of mRNAs and even in those cases where longer
CC   cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC   ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC   to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC   diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC   They are used to obtain upstream regulatory sequences and to design
CC   expression and secretion vectors

PT Nucleic acids encoding 4277 human colon cancer-associated polypeptides,
PT useful for preventing, diagnosing and/or treating colorectal cancers.
XX
PS Claim 1; Page 4589-4590; 9803pp; English.
XX
CC AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon
CC cancer-associated nucleic acid molecules (N) and proteins (P), where the
CC proteins are collectively known as colon cancer antigens. The colon
CC cancer antigens have cytostatic activity and can be used in gene therapy
CC and vaccine production. N and P may be used in the prevention, diagnosis
CC and treatment of diseases associated with inappropriate P expression. For
CC example, N and P may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of P by expressing inactive proteins or to
CC supplement the patients own production of P. Additionally, N may be used
CC to produce the colon cancer-associated Ps, by inserting the nucleic acids
CC into a host cell and culturing the cell to express the proteins. N and P
CC can be used in the prevention, diagnosis and treatment of colorectal
CC carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent
CC sequences used in the exemplification of the present invention. N.B.
CC Pages 666 to 682 and page 7053 of the sequence listing were missing at
CC time of publication, meaning no sequences are present for SEQ ID NO:1027
CC to 1052, 7921 and 7922

PT Genomic nucleotide sequences encoding polypeptides of Streptococcus
PT agalactiae for the development of vaccines, diagnostic tools, DNA chips
PT and identification of therapeutic targets.
XX
PS Claim 4; SEQ ID NO 5112; 439pp; French.
XX
CC The present invention relates to novel Streptococcus agalactiae
CC nucleotide sequences (I; ADV78860-ADV78998 and ADV83341-ADV85476) and
CC novel polypeptides (II; ADV78999-ADV81203 and ADV81205-ADV83340). The
CC nucleotide sequences encode polypeptides of S. agalactiae involved in the
CC synthesis of amino acids, cell membranes, intermediate (central)
CC metabolism, energetic metabolism, fatty acid and phospholipid metabolism,
CC nucleotide metabolism including purines, pyrimidines and/or nucleosides,
CC regulatory functions, replication, transcription, translation, protein
CC transport, adaptation to atypical conditions, sensitivity to medicines
CC and/or analogues, functions related to transposons, biosynthesis of
CC cofactors, prosthetic groups and transporters, cell membrane proteins and
CC cellular machinery. (I) are useful for the detection and/or amplification
CC of nucleic acids. Pharmaceutical composition comprising (I) or (II) are
CC useful for treatment of a bacterial S. agalactiae infection. The complete
CC genome of Streptococcus agalactiae is given in ADV81204. Note: The
CC present patent is an equivalent for the basic patent FR2824074A1, which
CC contains only 2344 sequences.

XX
PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 36707; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS   Claim 1; SEQ ID NO 7255; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting the
CC   nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT This sequence has been recovered from the left border of the T-DNA. It indicates an insertion close to or within gene At2g29840. Details on the protocols used for generation of the sequence are described in References 1-3. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at: http://www.mpiz-koeln.mpg.de/GABI-Kat/.

JOURNAL Submitted (31-MAR-2004) Weisshaar B., Max-Planck-Institut fuer Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
COMMENT This sequence has been recovered from the left border of the T-DNA. It indicates an insertion close to or within gene At1g53030. Details on the protocols used for generation of the sequence are described in References 1-3. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at: http://www.mpiz-koeln.mpg.de/GABI-Kat/.

JOURNAL Submitted (31-MAR-2004) Weisshaar B., Max-Planck-Institut fuer Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
COMMENT This sequence has been recovered from the left border of the T-DNA. It indicates an insertion close to or within gene At5g54040. Details on the protocols used for generation of the sequence are described in References 1-3. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at: http://www.mpiz-koeln.mpg.de/GABI-Kat/.

/note="Vector: pBluescript II XR; Site_1: EcoRI; Site_2: XhoI; This cDNA library was constructed from mRNA isolated from immature flowers of field grown plants. The cDNA library was prepared using the Stratagene pBluescript II XR library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into XL10-Gold host cells. This library was constructed by Dr. Randy Shoemaker and Dr. John Erpelding."

  JOURNAL   Submitted (31-MAR-2004) Weisshaar B., Max-Planck-Institut fuer
            Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
COMMENT     This sequence has been recovered from the left border of the T-DNA.
            It indicates an insertion within the locus defined by BAC clone
            fca_all. Details on the protocols used for generation of the
            sequence are described in References 1-3. The sequences are
            generated at the MPI for Plant Breeding Research in the context of
            the GABI-Kat project. GABI-Kat is part of the German Plant Genomics
            program designated 'GABI'. Information on line availability can be
            found at: http://www.mpiz-koeln.mpg.de/GABI-Kat/.

PT   Recombinant LSA-NRC polypeptide for use as a vaccine and a diagnostic
PT   agent, preferably for diagnosing malaria, comprises a liver stage antigen
PT   (LSA-1) epitope.
XX
PS   Claim 4; SEQ ID NO 26; 90pp; English.
XX
CC   The invention relates to a novel recombinant LSA-NRC polypeptide
CC   comprising liver stage antigen (LSA-1) T-cell and B-cell epitopes. LSA-1
CC   protein is found within the parasitophorous vacuole (PV) of Plasmodium
CC   falciparum. The polypeptide of the invention demonstrates antimalarial
CC   activities and may be useful as a vaccine during immunotherapy and as a
CC   diagnostic agent, preferably for diagnosing malaria. The current sequence
CC   is that of the LSA-NRC(H)Mut construct protein of the invention. The
CC   construct is harmonised for expression in Escherichia coli and comprises
CC   the harmonised N-terminal, C-terminal and 2 tandem repeats of the Malaria
CC   parasite P. falciparum LSA-1 in addition to a C-terminal His6 tag.

PT   Recombinant LSA-NRC polypeptide for use as a vaccine and a diagnostic
PT   agent, preferably for diagnosing malaria, comprises a liver stage antigen
PT   (LSA-1) epitope.
XX
PS   Claim 5; SEQ ID NO 4; 90pp; English.
XX
CC   The invention relates to a novel recombinant LSA-NRC polypeptide
CC   comprising liver stage antigen (LSA-1) T-cell and B-cell epitopes. LSA-1
CC   protein is found within the parasitophorous vacuole (PV) of Plasmodium
CC   falciparum. The polypeptide of the invention demonstrates antimalarial
CC   activities and may be useful as a vaccine during immunotherapy and as a
CC   diagnostic agent, preferably for diagnosing malaria. The current sequence
CC   is that of the LSA-NRC(H)Mut construct protein of the invention. The
CC   construct is harmonised for expression in Escherichia coli and comprises
CC   the harmonised N-terminal, C-terminal and 2 tandem repeats of the Malaria
CC   parasite P. falciparum LSA-1 in addition to an amino acid insertion
CC   within the T5 P. falciparum epitope and a C-terminal His6 tag.

XX
CC   A genomic DNA bank of P.falciparum EcoRI fragments prepared in lambda
CC   gt11 was used to transform E.coli. The expression library was screened
CC   with human antisera against antigens of all stages of P. falciparum. The
CC   library was rescreened with antibodies affinity- purified on a clone
CC   which was able to recognise antibodies specific to the hepatic phase.
CC   About 40 clones were detected which produced a characteristic LSA
CC   epitope. The clone with the largest insert (950 bases) encoded LSA-R-NR
CC   containing a 12-repeat region followed by a non-repeat region. Preferred
CC   antigenic polypeptides of the invention are derived from the amino acid
CC   sequence of LSA-R-NR. (Updated on 25-MAR-2003 to correct PN field.)

PT   Polypeptide(s) derived from liver stage of PLASMODIUM FALCIPARUM - for
PT   vaccination against, treatment of and diagnosis of malaria.
XX
PS   Claim 4; Page 55; 81pp; French.
XX
CC   A genomic DNA bank of P.falciparum EcoRI fragments prepared in lambda
CC   gt11 was used to transform E.coli. The expression library was screened
CC   with human antisera against antigens of all stages of P. falciparum. The
CC   library was rescreened with antibodies affinity- purified on a clone
CC   which was able to recognise antibodies specific to the hepatic phase.
CC   About 40 clones were detected which produced a characteristic LSA
CC   epitope. The clone with the largest insert encoded LSA-R-NR containing a
CC   12-repeat region (LSA-R) followed by a non-repeat region (LSA-NR). The
CC   sequence given here is a preferred polypeptide of the invention carrying
CC   a T cell epitope typical of liver-stage P.falciparum. See AAR26919-
CC   R26935, AAR26937 and AAR26939. (Updated on 25-MAR-2003 to correct PN
CC   field.)

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 20; SEQ ID NO 47660; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
CC   amino acid sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

CC The present sequence represents a human trichohyalin (TRHY) protein. The
CC protein is found in terminally differentiating epidermal tissue, and is
CC involved in forming the structural architecture of such tissue. The
CC trichohyalin protein is useful for forming a proteinaceous gel which may
CC then be used for healing wounds, or in breast implants

PT New composition comprising two or more isolated polypeptides, useful for
PT preparing a medicament for treating pain in an animal.
XX
PS Example 1; Page; 1017pp; English.
XX
CC The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a human protein (described in Table 3
CC of the specification) which is differentially expressed during pain.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic form directly from WIPO at

XX
PS Claim 1; SEQ ID NO 1; 39pp; Japanese.
XX
CC The present invention relates to a method (M1) for evaluating hair growth
CC -promoting activity, by using an antibody that recognizes an antigen
CC (ADR12189) of epithelial newborn follicles. Also claimed is a kit for
CC evaluating hair growth-promoting activity, comprising the antibody of
CC (M1). The present sequence is a murine trichohyalin-related protein,
CC which was used as the antigen in the method of the invention.

PT Novel oligopeptide or its modified form useful for enhancing hair growth
PT or for treating cardiovascular diseases, diabetes, liver diseases,
PT periodontal disease, intestinal disease or muscular dystrophy.
XX
PS Disclosure; SEQ ID NO 11; 80pp; Japanese.
XX
CC The invention relates to an oligopeptide or its modified form, used for
CC promoting hair growth, comprising 5-100 amino acid residues. The
CC invention also relates to a composition comprising the oligopeptide, its
CC modified form or its salt, and a hair growth stimulant comprising the
CC oligopeptide, its modified form or its salt. The oligopeptide is useful
CC for enhancing hair growth or for treating cardiovascular diseases,
CC diabetes, liver diseases, periodontal disease, intestinal disease,
CC muscular dystrophy or cholecystitis. This sequence represents a murine
CC hair growth stimulation related protein of the invention.

PT   New antibody specifically recognizing an antigen of 220kDa present in
PT   epithelial new follicles, useful for evaluating and inducing hair growth
PT   promoting activity and morphogenesis.
XX
PS   Claim 5; SEQ ID NO 157; 87pp; English.
XX
CC   The present invention relates to a novel antibody, or its fragment, which
CC   specifically recognizes an antigen of about 220kDa (ADW00404) present in
CC   new epithelial hair follicles. The antigen is specifically expressed
CC   during the growth period of an imago or the developing period of a fetus.
CC   Also claimed is a method for the evaluation of hair growth promoting
CC   activity, comprising incubating skin tissue derived from a mammal in the
CC   presence of a substance to be tested to promote hair growth, recovering
CC   the skin tissue, reacting the skin tissue with the antibody cited above,
CC   and detecting the antibody, or its fragment, that reacts with the skin
CC   tissue. The method and antibody of the invention are useful for
CC   evaluating and inducing hair growth promoting activity, treating and
CC   ameliorating symptoms of diseases associated with abnormal morphogenesis,
CC   inducing cardiovascular revascularization, regeneration and endothelial
CC   cell growth, such as in arteriosclerosis, Berger's disease, osteoporosis,
CC   fractures and angina pectoris, and in treating burns or wounds.

XX
CC The invention relates to human tumour-associated antigenic target (TAT)
CC polypeptides, and their related nucleic acids. The TAT polypeptides are
CC overexpressed in cancer tissues compared to normal tissues, and may thus
CC serve as effective targets for the diagnosis and treatment of cancer in
CC mammals. The invention also relates to nucleic acid and polypeptide
CC sequences at least 80% identical to the TAT nucleic acids and
CC polypeptides; expression vectors and host cells comprising a TAT nucleic
CC acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC TAT polypeptide; and methods and compositions for the treatment or
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC antibodies, antagonists, binding molecules and compositions are useful
CC for diagnosing or treating a cell proliferative disorder associated with
CC increased TAT expression, particularly cancers such as breast cancer,
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC cancer, pancreatic cancer, cervical cancer, cancers of the central
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC used as hybridisation probes, in chromosome and gene mapping, in
CC chromosome identification and in gene therapy. The present sequence
CC represents a TAT polypeptide of the invention

XX
CC Proteins AAW02657-W02720 represent a range of G-protein coupled receptor
CC (GPR) proteins selected from cAMP, adenosine, muscarinic acetylcholine,
CC adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin,
CC odorant, cytomegaloviral and other GPR proteins. The peptides AAW03578-
CC W03651 represent the N-terminal fragments of the above proteins. The
CC receptor proteins were used to design polypeptides, pref. based on the
CC transmembrane domains, for use in G-protein coupled receptor ligand
CC binding assays. The polypeptide fragments retain biological activity such
CC as binding a GPR ligand or modulating GPR ligand binding to a GPR (see
CC AAW02747-W02999 for examples of polypeptide fragments). The polypeptide
CC fragments can be used in compositions for treating subjects suffering
CC from a pathology related to a GPR abnormality e.g. a psychotic disorder
CC such as schizophrenia. (Updated on 25-MAR-2003 to correct PF field.)

PT   Treating or preventing a disease associated with rhodino virus infection
PT   in a mammal which includes Kaposi's Sarcoma and Primary Effusion
PT   Lymphoma.
XX
PS   Disclosure; Fig 7; 70pp; English.
XX
CC   The present sequence is the Kaposi's sarcoma-associated herpesvirus,
CC   (KSHV) latency-associated nuclear antigen (LANA). KSHV is also known as
```

```
CC   Human Herpes Virus 8 (HHV8) and belongs to the rhadino virus, or gamma-2
CC   herpes virus class. The LANA protein is necessary for the efficient
CC   persistence of rhadino virus DNA in mammalian cells. Persistent rhadino
CC   virus infection is implicated in a variety of diseases e.g. Kaposi's
CC   Sarcoma (KS), Primary Effusion Lymphoma (PEL) and multicentric
CC   Castleman's disease. In addition, KS is a common malignancy in HIV
CC   patients. KSHV persists in host cells in a latent form. One of the few
CC   genes expressed from the latent viral DNA is LANA. LANA associates with
CC   both human chromosomes and with the rhadino virus cis-acting element
CC   (RVCAE), thereby providing a tethering function: the KSHV DNA episome is
CC   "tied" to the host chromosomes. This allows the viral DNA to persist in
CC   the host cell. The present sequence may be used to screen and identify
CC   molecules that inhibit LANA interaction with RVCAE, thereby interfering
CC   with the latency cycle of this virus. Potential antiviral treatments for
CC   the above mentioned diseases may therefore be based on LANA deregulation.

PT New methods and compositions for the detection of human herpesvirus.
XX
PS Claim 2; Page 59-62; 68pp; English.
XX
CC Sequences AAY58480-Y58532 represent immunogenic polypeptides derived from
CC human herpes virus type 8 (HHV8, a gammaherpesvirus). HHV8 plays an
CC important role in the pathogenesis of AIDS-related Kaposi's sarcoma. The
CC invention relates to a novel method of detecting the presence of human
CC herpesvirus 8 in a biological sample using peptides representative of
CC dominant antigenic regions of HHV8. The method comprises contacting one
CC or more isolated, immunogenic HHV8 peptides with an antibody-containing
CC biological sample, and detecting the formation of a complex between the
CC peptide and the antibody. The presence of a peptide-antibody complex
CC indicates the presence of human herpesvirus 8. The detection of HHV8
CC infection can be used to diagnose AIDS-associated Kaposi's sarcoma. The
CC HHV8-specific antibodies are useful therapeutically when for the passive
CC immunisation of a human against HHV8 infection, thereby reducing HHV8
CC related disease. The detection assays are highly specific, sensitive and
CC accurate. Early detection and treatment of Kaposi's sarcoma could
CC diminish the severity of symptoms related to AIDS and the sensitive
CC techniques could reduce erroneous characterisations of skin disorders.
CC Previous assays for HHV8 antibodies such as immunofluorescence assays,
CC immunoblots and enzyme immunosassays lack the sensitivity and accuracy
CC needed for reliable diagnosis of Kaposi's sarcoma. Further advantages of
CC the assays are that reproducible results are obtained and the method is
CC suitable for rapid throughput and screening of samples economically.
CC (Updated on 06-AUG-2003 to correct OS field.)

PT   A composition for use in gene therapy comprises an expression vector that
PT   includes a nucleic acid sequence encoding a nucleic acid binding protein.
XX
PS   Disclosure; Fig 9B; 60pp; English.
XX
CC   The invention provides a composition comprising nucleic acid, histone H1
CC   protein and expression vector operationally encoding a protein suitable
CC   for tethering the nucleic acid to the histone H1 protein, where the
CC   tethering protein is LANA. The composition is useful in aiding the
CC   retention of the viral DNA in the host cell. The viral vector encodes a
CC   protein suitable for tethering DNA to Histone H1. Methods for screening
CC   for compounds which are agonistic or antagonistic for the tethering of
CC   viral proteins to histone H1 and DNA binding sites are useful for
CC   developing the method of viral transfer. The composition has applications
CC   to gene therapy, including the treatment of multiple sclerosis,
CC   Parkinson's disease, Huntington disease and diabetes. The present
CC   sequence represents the amino acid sequence of the Kaposi's sarcoma
CC   associated herpesvirus (human herpesvirus 8) latency-associated nuclear
CC   antigen (LANA), which acts as a tethering protein. (Updated on 06-AUG-
CC   2003 to correct OS field.)

PT System for episomal retention of plasmids in mammalian cells, useful in
PT gene therapy, comprises rhadinoviral LANA and RVCAE sequences.
XX
PS Disclosure; Fig 7; 27pp; English.
XX
CC The present invention describes a system (A) for maintaining a plasmid as
CC an episome in mammalian cells, comprising the rhadinoviral sequence LANA
CC (latency-associated nuclear antigen) of 3489 base pairs (see ABA93487,
CC S1) expressed in the cell, and the rhadinoviral sequence RVCAE
CC (rhadinoviral cis-acting element) of 801 base pairs (see ABA93488, S2)
CC present in the plasmid. Also describes is a method for maintaining a
CC closed circular DNA in a cell by expressing (S1) in the cells and having
CC (S2) as a cis-acting and maintenance sequence in the DNA. (A) is
CC particularly used in gene therapy (or other gene transfer applications)
CC that uses mammalian cells in which LANA is expressed. (A) improves
CC persistence of gene therapy vectors in cells. The present sequence
CC represents Kaposi's sarcoma-associated herpesvirus (KSHV, also called
CC human herpesvirus 8) LANA protein, which is used in the exemplification
CC of the present invention

PT Assays for compounds that modulate rhadino virus LANA action in trans on
PT a unit of rhadino virus DNA to mediate efficient episome persistence,
PT comprises detecting whether the compound inhibits expression of a gene
PT resident on that episome.
XX
PS Disclosure; SEQ ID NO 2; 28pp; English.
XX
CC The invention relates to an assay for determining whether a compound
CC modulates LANA (latency-associated nuclear antigen) from KSHV (Kaposi's
CC sarcoma-associated herpesvirus, also known as HHV8, human herpesvirus 8)
CC mediated persistence in a mammalian cell of a DNA episome having RVCAE
CC (rhadinovirus cis-acting element) by detecting whether the compound
CC inhibits expression of a gene resident on that episome. Also included are
CC maintaining a closed circular DNA in a mammalian cell in which LANA is
CC expressed (by using RVCAE as the cis-acting origin and maintenance
CC sequence) and maintaining a plasmid as an episome in a mammalian cell
CC (comprising: (a) Expressing LANA in the cell; and (b) having RVCAE
CC resident on the plasmid). Compounds identified as interfering with the
CC interaction between LANA and RVCAE are useful in treating or preventing
CC rhadino virus infection (e.g. primary effusion lymphoma (PEL)). LANA acts
CC in trans on a 0.8 Kb KSHV TR (terminal repeat) unit to mediate efficient
CC episome persistence. The present sequence represents KSHV LANA.

PT New composition having a latency-associated nuclear antigen (LANA)
PT nucleic acid, useful for detecting compounds for treating tumors and
PT viral infections.
XX
PS Disclosure; SEQ ID NO 2; 51pp; English.
XX
CC The invention relates to a composition comprising a latency-associated
CC nuclear antigen (LANA) nucleic acid having any of 14 fully defined
CC sequences of 10-61 bp given in the specification (ADV68159-ADV68172). The
CC methods and compositions of the present invention are useful for
CC detecting compounds that are agonistic or antagonistic for the binding of
CC viral genetic material to genomic host DNA, in particular for detecting
CC compounds for treating tumor and viral infections. This sequence
CC corresponds to the LANA protein from the Kaposi's sarcoma-associated
CC herpesvirus (also called human herpesvirus 8). The LANA protein tethers
CC the viral DNA to the human chromosomal structural protein histone H1.

XX
CC   The polynucleotide sequences given in AAC79681 to AAC79730 encode the
CC   human secreted proteins given in AAB44596 to AAB44645. AAB44646 to
CC   AAB44693 represent human secreted polypeptide sequences and proteins
CC   homologous to them, which are given in the exemplification of the present
CC   invention. Human secreted proteins have activities based on the tissues
CC   and cells the genes are expressed in. Examples of activities include:
CC   cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral;
CC   antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer;
CC   vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; and
CC   cardiant. The polynucleotides and polypeptides are useful for preventing,
CC   treating or ameliorating a medical condition in e.g. humans, mice,
CC   rabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides
CC   can also be used as a food additive or preservative to increase or
CC   decrease storage capabilities. The polynucleotides are useful for
CC   chromosome identification. They are also useful as probes for diagnosing
CC   a disorder related to the female reproductive system, particularly breast
CC   and/or ovary cancer. They are also useful in the gene therapy of breast
CC   and ovarian cancer. The nucleic acids, protein, antibodies, agonists and
CC   antagonists from the present invention are useful in the diagnosis,
CC   treatment and prevention of: cancer; immune disorders; cardiovascular
CC   disorders; wound healing; neurological diseases; and infectious diseases.
CC   AAC79672 to AAC79680 and AAB44595 represent sequences used in the
CC   exemplification of the present invention

XX
CC AAR70491-93 are polypeptides having a whole or partial epitope of a
CC structural protein of Leucocytozoan protozoa encoded by AAQ87587-89. The
CC polypeptides and DNA encoding them are useful in the production of
CC vaccines for the treatment of leucocytozoanosis of fowl. (Updated on 27-
CC AUG-2003 to correct OS field.)

CC   The present invention describes proteins and their fragments (I) encoded
CC   by chromosome 2 of the human malarial parasite, Plasmodium falciparum.
CC   Also described are: (1) nucleotide sequences (II) encoding (I); and (2)
CC   vaccines against P. falciparum infection comprising (I) or (II). (I) and
CC   (II) are useful for the development of vaccines against P. falciparum
CC   infection. (I) and polyclonal antisera or a monoclonal antibody raised to
CC   immunogens comprising the sequences of (I), are useful in the detection
CC   of infection with P. falciparum. Furthermore, (I) (especially when they
CC   are rifins or secreted or membrane proteins) can aid the identification
CC   of drugs to treat or prevent P. falciparum infection, or they can be used
CC   to identify drug resistance in P. falciparum. Sequencing of the
CC   Plasmodium chromosome 2 and the subsequent identification of proteins
CC   encoded by it will help to expand our understanding of parasite biology,
CC   a process hampered by the complexity of the parasitic lifecycle, and
CC   provide new targets for vaccine and drug development. Parasite resistance
CC   to drugs and mosquito resistance to insecticides have led to a resurgence
CC   of malaria in many parts of the world, and there is a pressing need for
CC   vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352
CC   represent nucleotide and protein sequences given in the present
CC   invention, but which are not specifically mentioned within the
CC   specification

PT   New nucleic acid molecule for diagnosing, preventing or treating diseases
PT   such as proliferative (e.g. cancer), inflammatory, immune, metabolic,
PT   genetic, bacterial and viral diseases.
XX
PS   Claim 1; SEQ ID NO 1882; 428pp; English.
XX
CC   The present invention relates to an isolated nucleic acid molecule
CC   encoding a polypeptide which is believed to be cytostatic,
CC   antiinflammatory, immunosuppressive, antibacterial and virucidal. The
CC   composition and methods are useful for diagnosing, preventing and
CC   treating diseases such as proliferative (e.g. cancer), inflammatory,
CC   immune, metabolic, genetic, bacterial and viral diseases. The present
CC   sequence represents a human secreted protein. The present sequence is
CC   available on WIPOWEB and is not in the specification.

XX
PS Disclosure; SEQ ID NO 2763; 21pp + Sequence Listing; English.
XX
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

CC   Proteins AAW02657-W02720 represent a range of G-protein coupled receptor
CC   (GPR) proteins selected from cAMP, adenosine, muscarinic acetylcholine,
CC   adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin,
CC   odorant, cytomegaloviral and other GPR proteins. The peptides AAW03578-
CC   W03651 represent the N-terminal fragments of the above proteins. The
CC   receptor proteins were used to design polypeptides, pref. based on the
CC   transmembrane domains, for use in G-protein coupled receptor ligand
CC   binding assays. The polypeptide fragments retain biological activity such
CC   as binding a GPR ligand or modulating GPR ligand binding to a GPR (see
CC   AAW02747-W02999 for examples of polypeptide fragments). The polypeptide
CC   fragments can be used in compositions for treating subjects suffering
CC   from a pathology related to a GPR abnormality e.g. a psychotic disorder
CC   such as schizophrenia. (Updated on 25-MAR-2003 to correct PF field.)

CC   This invention describes novel polynucleotides and polypeptides isolated
CC   from human cDNA libraries which can be used for gene therapy or in
CC   vaccines. The polynucleotides of the invention and antibodies encoded by
CC   them may be used in the prevention, diagnosis and treatment of diseases
CC   associated with inappropriate polypeptide expression. The products of the
CC   invention may also be used to identify modulators of expression and
CC   activity and to down regulate expression and activity. The antibodies of
CC   the invention may also be used as diagnostic agents for detecting the
CC   presence of polypeptides in samples. This sequence represents a homologue
CC   of a polypeptide described in the disclosure of the invention

PT   New isolated Toxoplasma gondii nucleic acids used, e.g. to treat
PT   infection caused by this microorganism.
XX
PS   Claim 29; Page 227-229; 381pp; English.
XX
CC   The invention provides isolated Toxoplasma gondii nucleic acids that
CC   encode immunogenic polypeptides. The T. gondii nucleic acid molecules,
CC   immunogenic proteins and antibodies to the proteins can be used to
CC   inhibit T. gondii oocyst shedding in a cat due to infection with T.
```

```
CC   gondii. They can be used for preventing T. gondii infection and for
CC   preventing the spread of T. gondii infection. They can also be used for
CC   detecting T. gondii infection. The detection method can be used to detect
CC   parasite cysts or oocysts in feces, e.g. from enteric apicomplexa oocysts
CC   such as Cryptosporidium oocysts and Toxoplasma oocysts

XX
PT   Detecting parasite oocysts or cysts in feces, comprises eluting DNA from
PT   sample into aqueous solution by heating, amplifying DNA with primers
PT   specific for oocysts or cysts being detected, and detecting amplification
PT   product.
XX
PS   Example 2; Page 91-93; 188pp; English.
XX
CC   The invention relates to detection of parasite oocysts or cysts in a
CC   faeces sample comprising contacting the sample with a solid support,
CC   drying and then washing the sample with an aqueous wash solution, adding
CC   an aqueous elution solution and eluting DNA from the sample by heating
CC   and amplifying by PCR oocyst/cyst-specific DNA and detecting the
CC   amplification products. The method is useful for detecting parasite
CC   oocysts e.g., enteric apicomplexa oocysts such as Cryptosporidium oocysts
CC   or Toxoplasma oocysts, or for detecting parasite cysts e.g. Giardia
CC   cysts. The method is also useful for developing vaccines to prevent
CC   oocyte shedding in cats. The present sequence represents an immunogenic
CC   protein from Toxoplasma gondii

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
